ATCO REPS:

Introducing an exciting change to ATCO's black-jacketed flexible ducts, for indoor use!

Over the next several weeks, ATCO will be making a rolling change to our UPC#080/086/088, etc. line of indoor flexible ducts.

The polyethylene outer jacket is being replaced with a superior, black, tri-directional scrim reinforced, POLYESTER outer jacket/vapor barrier.

This change **ONLY** affects the outer jacket/vapor barrier. There will be no change to ATCO's industry leading, black inner core, or to the high quality blanket of Owens Corning, Eco-Touch insulation.

This change does not apply to HUD mobile home ducts (#040/046/048/047/049/041), which have a thicker polyethylene outer jacket, designed to meet the HUD requirements for manufactured housing.

The new black jacketed products will be designated as #180/186/188, etc. Spec sheet attached. Samples are available as needed.

Please make your customers aware of this rolling change, as we will not be sending this notice directly to them.

If you have further questions, please don't hesitate to contact us.

Thanks,

ATCO Sales and Customer Service Department
