

# NSF-Approved Remediation Duct Sealants

Choosing a product certified by NSF lets you know the manufacturer complies with strict standards and procedures imposed by NSF. Founded in 1944 as the National Sanitation Foundation, NSF International's mission is to protect and improve global human health. Over the past seven decades, this independent, accredited organization has developed more than 80 public health standards and independent testing protocols. Today, NSF tests, audits and certifies products and systems, providing consumers with assurance that the products they use meet strict standards for public health protection.

Carlisle HVAC Products is pleased to announce that two of its duct sealants are listed with NSF. Both RE-500™ Sprayable Insulation Encapsulator/Coating and RS-100™ Remediation Duct Sealant are NSF Listed for use in food preparation areas.

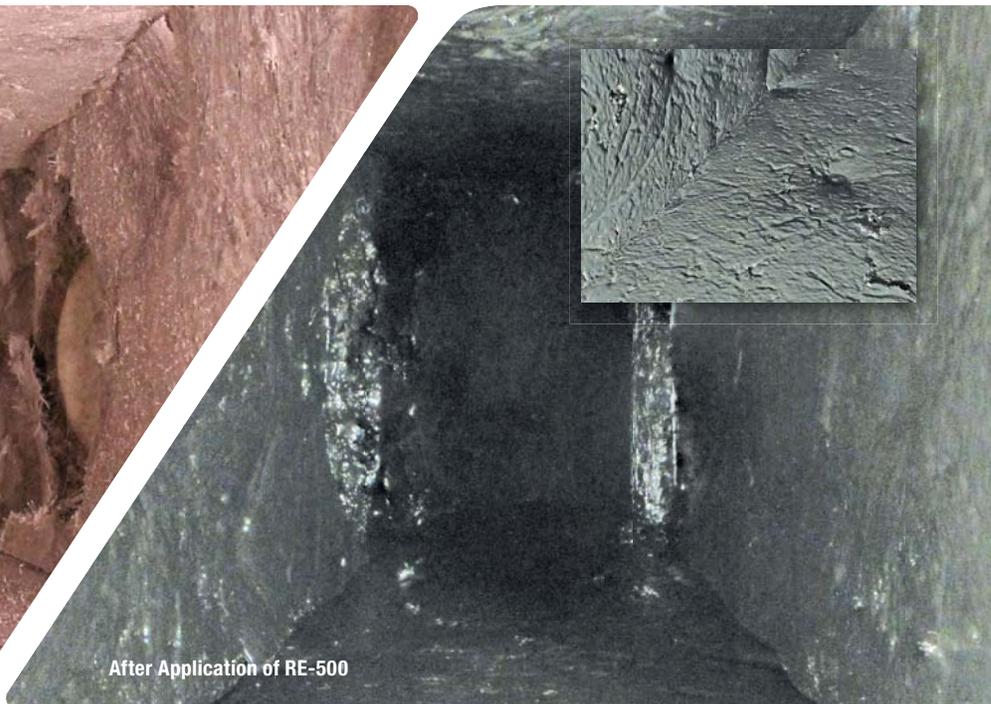

## RE-500

RE-500 is a high-performance, sprayable insulation encapsulant and coating for use inside HVAC ductwork. Available in black and white, its semi-gloss finish provides a surface that will prevent debris accumulation that could lead to mold growth. RE-500 improves indoor air quality by coating the system against dirt and dust while providing a "like new" duct surface that is resistant to mold, mildew and fungi.

Don't replace your ductwork... resurface it!

Before Application of RE-500

## RS-100

RS-100 is a high-strength sprayable duct sealant that is specifically engineered to seal joints and seams from the inside of the HVAC ductwork. The superior physical properties of this sealant meet and exceed all SMACNA pressure classes, while providing a true SMACNA Class A seal. RS-100's smooth, non-tack surface provides resistance to mold and mildew growth. This innovative sealant is water-based, fiber-free and non-flammable. RS-100 is flexible, allowing for system vibration without cracking, supplying a permanent solution to leaking ductwork.

Don't replace your ductwork... remediate it!

Before Duct Sealing

After Duct Sealing

**Carlisle HVAC Products provides the best, longest-lasting duct sealing options on the market. Innovative, cost-effective products like RE-500 and RS-100 improve air quality by sealing your duct system against dirt and dust, and save money and energy by minimizing air leakage.**

*For almost 50 years, Carlisle HVAC Products, a vendor partner and member of the National Air Duct Cleaners Association (NADCA), has been providing innovative, high-performance products for the Heating Ventilation and Air Conditioning (HVAC) industry. Carlisle HVAC's Hardcast and DynAir brands can provide contractors with all the materials necessary to ensure duct systems function at optimum levels. Carlisle HVAC offers rolled duct sealants, mastics, adhesives, coatings, airflow management hardware, and much more.*
